LAB #4 | CASCADING STYLE SHEETS

CSS FLEXBOX WEBSITE LAYOUT

Topic	Creating a web page layout using HTML and CSS Flexbox
Domain of learning	Psychomotor (P2: Set; P3: Guided Response; P4: Mechanism)
Learning objectives	1. Construct a multi-section website layout using HTML and CSS Flexbox. 2. Apply CSS layout, spacing, colour and responsive design properties.
Lab activity objective	Rebuild the layout demonstrated in class, then customise it for a practical website.
Instruction	Complete all tasks individually using HTML and internal CSS. No CSS framework or JavaScript is required.

Lab assignment

Develop a simple homepage for FSKTM IT Club. The page must follow the five-part Flexbox layout demonstrated during the CSS lecture.

Your page must contain a logo/header, navigation bar, content area (side-bar and body area), and footer. The layout below shows the required structure.

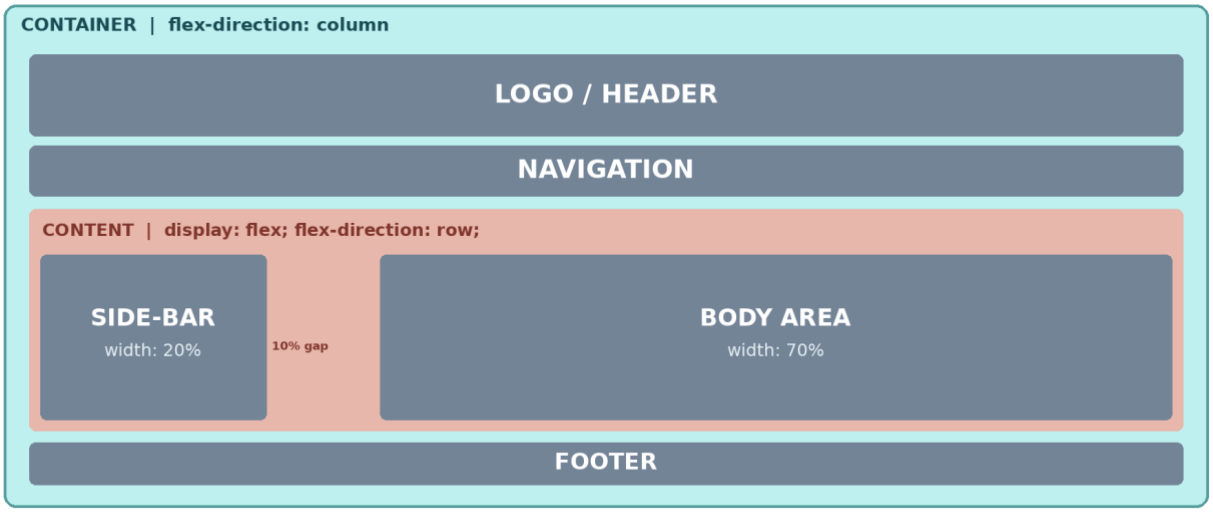

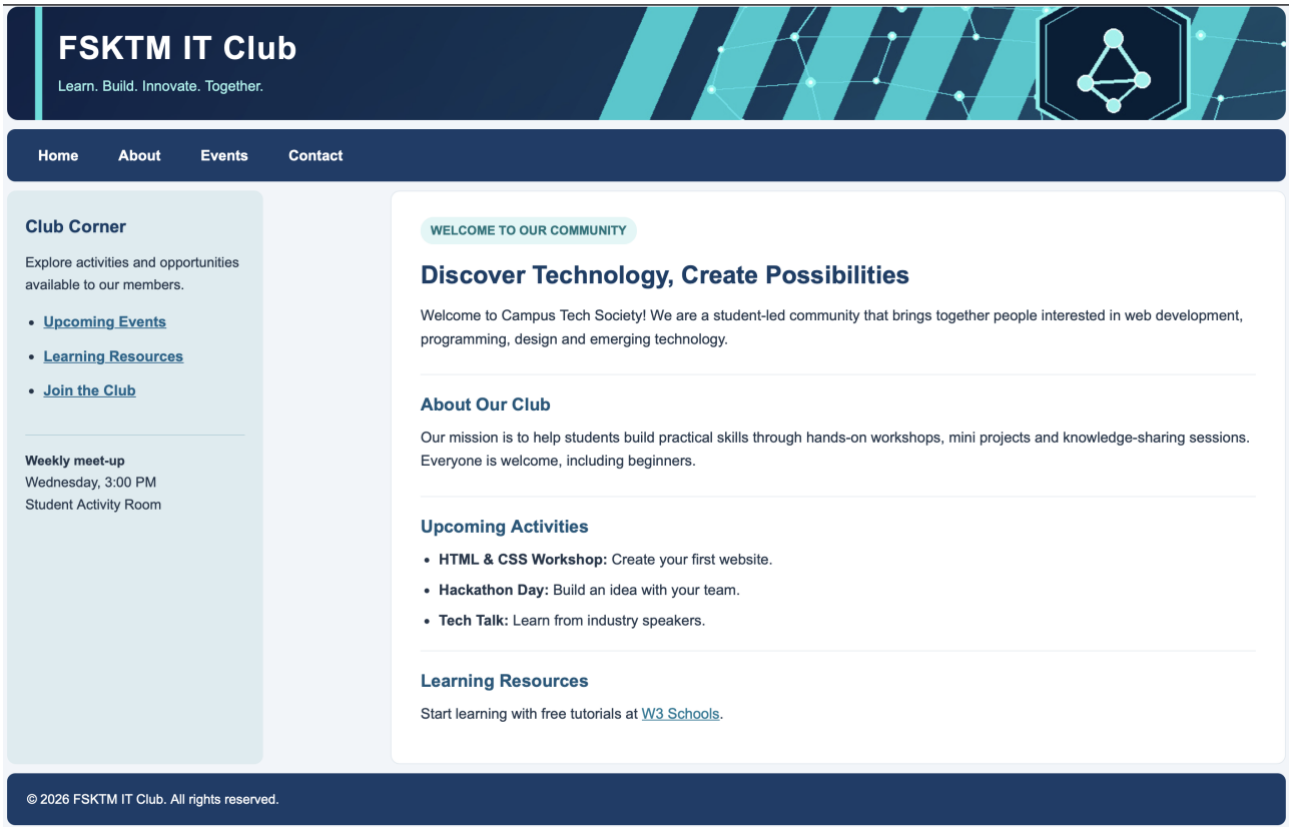

Figure 1. Required Flexbox layout).

Below is the output sample. You can download the header from here: https://drive.google.com/file/d/1O6nmbIAm71PE-dsDe7YYwP5c2-wEj700/view?usp=sharing

Task 1 — Build the HTML structure

- Create a folder named `Lab_4` and save the main file as `index.html`.
- Use a parent `<div class="container">` with child regions in this order: `logo`, `navigation`, `content` and `footer`.
- Inside the content region, include `<div class="side-bar">` and `<div class="body-area">`.

Task 2 — Apply CSS Flexbox

Create your CSS in the `<style>` section of `index.html`.

- **Page reset:** Use the universal selector (`*`) to set `margin: 0`, `padding: 0` and `box-sizing: border-box`.
- **Main container:** Set `.container` to `display: flex` with `flex-direction: column`, `width: 100%` and `min-height: 600px`.
- **Major regions:** Stack `.logo`, `.navigation`, `.content` and `.footer` vertically. Set `min-height` values of `100px`, `50px`, `400px` and `20px` respectively; add `10px` top spacing between regions.
- **Content layout:** Set `.content` to `display: flex`, `flex-direction: row` and `justify-content: space-between`.
- **Two content columns:** Set `.side-bar` to `width: 20%` and `.body-area` to `width: 70%`. Use a suitable minimum height and contrasting background colours.

Task 3 — Customise and improve the webpage

- Display your club name in the logo/header area and at least four navigation links (e.g. Home, About, Events, Contact).
- Place at least three useful items or links in the `side-bar`. Add at least two headings and two paragraphs in the body area.
- Use a consistent colour theme. Apply padding, suitable font sizes and spacing to improve readability.
- Ensure text fits within each region and remains visible as the browser width changes.

Submission

- Push `index.html` (and any local assets) to a GitHub repository and enable GitHub Pages.
- Submit one PDF through Author containing your name and matric number, HTML/CSS code, screenshots of your website, and the GitHub Pages URL.
- Submission deadline: Wednesday, 28 October 2026, before 11:59PM.

Important: The demonstration code is a starting point. Your submission must include your own content and visual styling.

Assessment rubrics

Total: 20 marks | A. Cognitive (CLO1): 5 marks | B. CSS Styling and Design (CLO2): 15 marks

Criteria	Excellent (5)	Good (4)	Satisfactory (3)	Needs Improvement (1–2)	Unsatisfactory (0)	Score
Understanding of layout and CSS behaviour (C2–C4) 5 marks	Accurately explains column/row directions and spacing, with a clear and relevant reflection.	Explains all key CSS decisions with minor inaccuracies.	Explains basic layout choices but with limited detail.	Partial or unclear explanation of key properties.	No relevant understanding demonstrated.	___ / 5
HTML structure and Flexbox implementation (P2) 5 marks	All five regions and nested columns are correctly structured; required CSS properties work as intended.	Correct overall structure with only minor layout errors.	Essential regions present; some Flexbox or sizing errors.	Several missing or incorrectly arranged regions.	Required layout not implemented.	___ / 5
Styling, content and usability (P4) 5 marks	Consistent visual theme, well-spaced content, working navigation and excellent readability.	Attractive styling and usable navigation with minor weaknesses.	Adequate styling/content; usability could improve.	Limited styling, weak content or difficult navigation.	No meaningful styling or usable content.	___ / 5

Responsive layout and testing (P4) 5 marks	Mobile and desktop layouts display correctly; media query works and no content overflows.	Responsive layout works with minor issues.	Basic stacking works but has visible sizing/spacing issues.	Media query incomplete or substantially incorrect.	No responsive behaviour or evidence of testing.	___ / 5

TOTAL MARKS: _____ / 20

Scoring guide: Record a mark from 0 to 5 for each criterion; add the four marks for the final total.
